

# PRESS RELEASE

## Project B-SAFE

**Subject:** European Project B-SAFE aims to improve knowledge and skills regarding internet security issues and personal data protection

**Portugal, January 2020** - In a online world where the digital presence of everyone is growing more and more each day, people need to be more aware about their behavior especially about the their personal data protection and online security.

After the first output, that studied the current situation of data protection at European and country level, the second output of this project was focused in “Legal aspects of internet security”.

The main conclusions in this second output where:

- There are a lack of cybersecurity awareness, skills and standards by the overall society at European level;
- There is still missing some legal information regarding these themes that difficult the understanding and the application of security measures;
- Lack of training activities to improve the knowledge and competences about cybersecurity;
- General lack of involvement between all the workforce in the cybersecurity strategy of companies;
- It is necessary to improve information exchange and coordination between the legislation actors and the private and public sectors that should work alongside to answer some of the cybersecurity issues that may arise.

The project has entered the next phase (Output 3: Development of the specialized texts) where the goal is to create suitable and effective learning materials in several languages (English, Portuguese, Czech and Austrian) for the B-SAFE Curriculum that will be available in the online platform of this project until September of this year. With the help of the developed materials people of the training can repeat lessons, look up information and practice tasks as they will appear in the final test for the evaluation of learning success.
